## **DETAILED ACTION**

### ***Specification***

The disclosure is objected to because of the following informalities: the application's parentage should be included as the first line of the specification (See MPEP 1893.03(c)). Appropriate correction is required.

The disclosure is also objected to because the compound structures which appear on pages 30-34 should be deleted and submitted instead as formal drawings (See 37 CFR 1.58).

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It is unclear, when  $m=2$  in general formula (1), exactly what might be the "connecting group" which any of  $R_2$  to  $R_6$  represents, because such a group is undefined. It is also unclear, when  $m=2$  in general formula (1), exactly what the two connected moieties might be, since they are also undefined. Analogously, it is unclear, when  $n=2$  in general formula (4) or (5), exactly what might be the connecting group and the two connected moieties.

Art Unit: 1621

The remaining claims are also rejected under 35 USC 112, second paragraph, as claims which depend from indefinite claims are also indefinite. *Ex parte Cordova*, 10 USPQ 2d 1949, 1952 (PTO Bd. App. 1989).

### ***Allowable Subject Matter***

The subject matter of claims 1-10 would be allowable once the 112 rejection outlined above has been overcome. The following is a statement of reasons for the indication of allowable subject matter:

The closest prior art appears to be JP 2000239235 (CAPLUS abstract), which teaches a related reaction for the production of arylamines. Significantly, however, the prior art neither teaches nor suggests the use of applicant's organic salt of general formula 1, 2 or 3 in the reaction. Nor would it have been obvious to one of ordinary skill in the art at the time of the invention to modify the teachings of the prior art in order to arrive at those of the instant invention. There is no motivation to do so.
